No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C. NATI. CONTROLLING THE ACTION OF VITAMIN D3 BY CONTROLLING THE EXPRESSION OF HORMONE SENSITIVE GENES.

SUBCELLULAR. LOCATION: NOCLEAR.

ALTERNATIVE PRODUCTS: TWO FORMS (A AND B) ARE PRODUCED BY USE ALTERNATIVE: INITIATION CODONS IN THE SAME READING FRAME. ALTERNATIVE: INITIATION CODONS IN THE SAME READING TRAME.

DOMAIN: COMPOSED OF THREE DOMAINS: A MODULATING NOTERNINAL DO A DNA-BINDING DOMAIN AND A C-TERMINAL STEROID-BINDING DOMAIN.

SIMILARITY: BELONGS TO THE NUCLEAR HORMONE RECEPTORS FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          4
